

Introducing the **Pressonline CMS**

2023

There are countless PDF files, forgotten glossaries and unvisited FAQs with valuable content barely read all over the web – largely due to outdated publishing technologies.

Mobile usability, responsiveness, APIs, Google and Facebook compliance, automated SEO to reach new users, and easy-to-use native and display advertising interfaces are now standard requirements for a publishing tool.

The wiki-style, SaaS-based Pressonline CMS platform is the application which aligns with today's prevailing internet trends.

Pressonline CMS. No need for a programmer, operator, SEO expert - only content.

the prevailing technological trends of today.

With Pressonline CMS, you can quickly develop and publish a website or a "self-identical" sub-page of an existing website that

- supports business-related use and continuous content development with its automated services:
 - flexible management and continuous optimization of keywords and content;
 - immediate automated integration of new content into the existing keyword network;
 - internal link generated with machine learning support that provides a large number of links with real connections;
- background (DigitalOcean LLC Frankfurt am Main, Germany / New York, USA);

The Pressonline CMS is a wiki-like native Software as a Service (SaaS) content publishing solution that matches

• allows quick re-editing and publishing of PDF files, that otherwise have many conversion and access problems; • ensuring fast response time and supports the organic reach of new users with its high Google compliance resulting from its content structure, "mobile first" approach, technological solutions and cloud-based server

• its application is a cost-effective SaaS solution compared to individual developments or previous online tools.

What is Pressonline CMS good for?

REPLACE PDF DOCUMENTS

An essential tool for content marketing is producing and publishing information materials containing companies' surveys, studies, and data collections. It's a shame that these are usually PDF documents, so only a few people receive them – Pressonline CMS solves this problem.

What are the main advantages of using Pressonline CMS? /1.

Pages created with the Pressonline CMS platform have great Google compliance. It is ensured by the automated SEO solution, the choice of a wiki-style content structure, the internal links that can be generated by machine learning, and applied technology solutions. This is also illustrated by the data of our Hungarian-language glossary, the <u>Start Up Guide Galaxis</u>, created to test the platform.

Since its publication, the direct traffic of the test glossary remained almost unchanged, while the Google ranking of the terms in the glossary improved continuously. In parallel, the organic reach of the glossary increased many times the initial number of visitors (without using paid online advertising tools). We see a similar pattern on those of our partners' websites who are using Pressonline's CMS platform.

"I want to know moment"

In the case of content that is primarily informative transfer and not entertaining, the importance of immediate access to information is very important, the response in the "I want to know moment" which is only available for a few seconds. In contrast to pages with a traditional content structure, that are often a bit difficult, Pressonline CMS always leads users (from a mobile or desktop) directly and immediately to the desired content they were looking for.

Flexible keyword management

based on its own traffic statistics and the traffic statistics of Google, the glossary platform provides the

- flexible management of keywords and content;
- immediate automated integration of new content into the existing keyword network;
- the ability to respond quickly in the development of professional content.

Cost-efficiency and time savings

- You save costs because you don't have to pay a programmer or an operator;
- internal links. Pressonline CMS does all that for you.

• You save time – anyone who has done this before knows that much of the time spent on content development is spent on administration, transcribing changes and their impact, and finding broken

On the client's side:

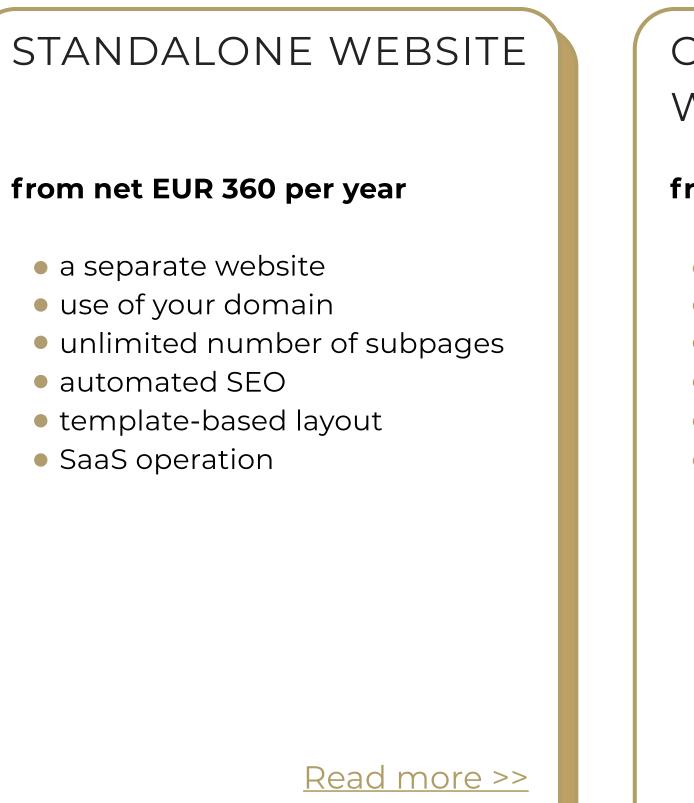

- technical development and technical operation are not required;
- redirections to the Pressonline server;
- contents of the Pressonline CMS via API (search box, content recommender);
- the client's page;
- preparing and forwarding or uploading the content;
- delivery of native/programmatic ads (if there is any).

• insertion of new menu items pointing to the new microsite on the client's website and the A record

• placing some embeded codes in the site, that are required to activate the services that actively use the

• creating links leading to the new microsite, including collections of terms or specific terms (backlink) on

DFE

CHILL ANTALFA

Pressonline Ltd. (www.pressonline.hu) is a Hungarian-owned company developing online content marketing solutions.

Our content marketing partners in Hungary: https://startupguide.hu/#partnerek

As part of our content marketing work, we created our first wiki-like online glossary in 2020. During the development, we faced the fact that we could not find a glossary-dictionary-FAQ application suitable for today's Internet technology, online communication, and business user requirements.

Since then we developed the Pressonline CMS platform which, is a highly Google-compliant, native content marketing solution, optimized (also) for mobile, suitable for the quick and efficient creation of wiki-structured pages (e.g., online glossaries) in line with today's prevailing internet trends, and ensures the increasing organic reach of new users with automated search optimization.

Pressonline is a member of **IAB Hungary**.
